

5% Hydrogen peroxide,  
0.005% Silver Solution VGS

## Civil protection and emergency services

### VGS offers your employees security

Employees assigned to civil protection or emergency services are often the first to come into contact with contaminated areas. Automatic vehicle disinfection at the touch of a button makes everyday work safer. After the defined disinfection and rest phase, the vehicle can be used safely. Since the disinfection process runs automatically, no employee is exposed to aerosols from the disinfectant. In addition, there is no wet film or residue on the surface that should be wiped off.

.This product has been

This product has been successfully tested in the laboratory and contributes to the fight against 2019-nCoV (COVID-19). It is also accepted by Health Canada as a hard surface disinfectant. Its effect is intensified by silver ions which, on the one hand, catalytically intensify the effect of peroxide and, on the other hand,

also block the metabolism of germs and viruses. In addition, the possibility of cell multiplication is eliminated.

Unlike other disinfectants, VGS solution leaves no residue on surfaces since the only decomposition product is water. It can be used for disinfection on any kind of hard surface. Silver improves the disinfecting effect and inhibits re-germination due to the deposit effect.

## Disinfectant for aerosol applications

Disinfection by aerosol spray is used wherever effective and rapid treatment of large areas is required. It is suitable for premises pre-cleaned in the medical, food, pharmaceutical and commercial sectors.

Because it completely covers the surface, disinfection by aerosol spray is the ideal solution, in particular where resistant microorganisms, like COVID-19, or other germs of unknown origins, are present.

## Mist application

The dosage per cubic meter is approx. 8 ml per cubic meter.

A 20-meter transport bus requires less than 200 ml of Solution for mist disinfection.

A motor vehicle or a cab in a van requires less than 25 ml of Solution for mist disinfection

## DETAILS ON S010

PACKAGING	ACTIVE INGREDIENTS
5 kg 10 kg 25 kg	<ul style="list-style-type: none"><li>• 5 % H<sub>2</sub>O<sub>2</sub></li><li>• 0,005 % Ag</li></ul>
TYPE OF PRODUCT	STORAGE
Ready to use	<b>2</b> years

The disinfectant works best when it dries on the treated surface. Do not rinse after drying.

Areas of use of the product:

- Transport vehicles (bus, metro, ambulance, emergency vehicle)
