

# ODOR-ZYME

**TRULY LONG LASTING ODOR CONTROL**

Do you have an unwanted distinct aroma in your facility?

**Do you want to get rid of that?**

(This is not an odor cover up. This is solving odor problems at the source.)

Odor-Zyme will eliminate those unwanted odors.

## WHAT IS ODOR-ZYME?

ODOR-ZYME is a unique combination of bacteria, spores, and multiple enzyme systems in liquid form. These ingredients act synergistically, to promote the biodegradation of solid organic matter. ODOR-ZYME contains multiple enzymes, that begin to work immediately in the waste environment. They in effect "JUMP START" the system to provide a ready food source for the bacteria. If there is no food, the spores populate the surfaces, and wait.

## IS ODOR-ZYME SAFE?

ODOR-ZYME contains no harsh acids or caustics. It will not corrode equipment (Synthetic material). **Most important the bacteria are non-pathogenic(not harmful to man).** They are guaranteed free of salmonella and staphylococci. ODOR-ZYME contains both aerobic and non-aerobic bacteria. It is totally biodegradable unlike quats, thus, ensuring environmental safety.

## HOW DOES ODOR-ZYME WORK?

When introduced into a waste system, the dormant bacterial spores begin to grow. Under optimum conditions, these bacteria, will reproduce by cell division, every 20 minutes. Each cell could conceivably add 16 million organic degrading bacteria to the system in an eight hour period.

Bacteria cannot absorb normal waste . To do this, they produce enzymes. These enzymes digest the waste solids, into a food source, that can be easily absorbed by the cell. The cell then splits forming two cells and so on.

An odor counteractant, provides initial relief from unpleasant odors and gases in the waste system.

On-going odor control is provided by the biodegradation of odor causing waste matter.

**ODOR-ZYME provides this long lasting control.**

After all, would you rather smell this...

Or this...
